

Log Likelihood Part 2

Once you computed the λ dictionary, it becomes straightforward to do inference:

$$\sum_{i=1}^{m} log \frac{P(w_i|pos)}{P(w_i|neg)} = \sum_{i=1}^{m} \lambda(w_i)$$

$$\log \text{ likelihood} = 0 + 0 + 2.2 + 0 + 0 + 0 + 1.1 = 3.3$$

Pos	Neg	λ
0.05	0.05	0
0.04	0.04	0
0.09	0.01	2.2
0.01	0.01	0
0.03	0.01	1.1
0.02	0.02	0
0.01	0.09	-2.2
0.02	0.03	-0.4
	0.05 0.04 0.09 0.01 0.03 0.02 0.01	0.05 0.05 0.04 0.04 0.09 0.01 0.01 0.01 0.03 0.01 0.02 0.02 0.01 0.09

As you can see above, since 3.3>0 , we will classify the document to be positive. If we got a negative number we would have classified it to the negative class.
